

# Coastal Bend Climate Change Vulnerability Assessment

Meagan Murdock  
[meagan.murdock@tnc.org](mailto:meagan.murdock@tnc.org)  
Marine GIS Manager

# Vulnerability assessment

**Goal:** Identify sectors that may be *vulnerable* to climate change (stressors)

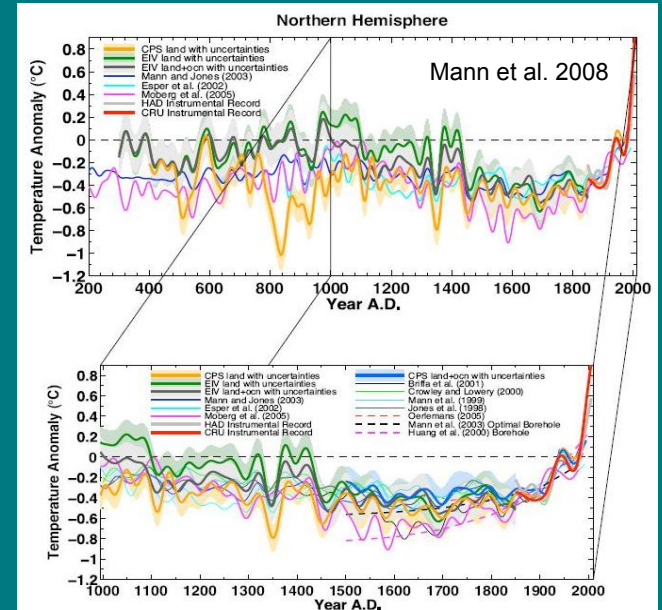

- 
- The diagram illustrates the five steps of vulnerability assessment, grouped into three phases using curly braces:
- 1. Stressors Identification
  - 2. Stressors analysis
  - 3. Scenario choice
  - 4. Sectors identification
  - 5. Sectors analysis
- The phases are indicated by curly braces on the right side of the list:
- 1<sup>st</sup> climate change (encompasses steps 1 and 2)
  - 2<sup>nd</sup> future projections (encompasses step 3)
  - 3<sup>rd</sup> social, economic, and natural (encompasses steps 4 and 5)

# Vulnerability assessment- *Stressors identification*

- What is climate change?
- How is climate changing?
- How does climate change effect me?

# Stressors identification

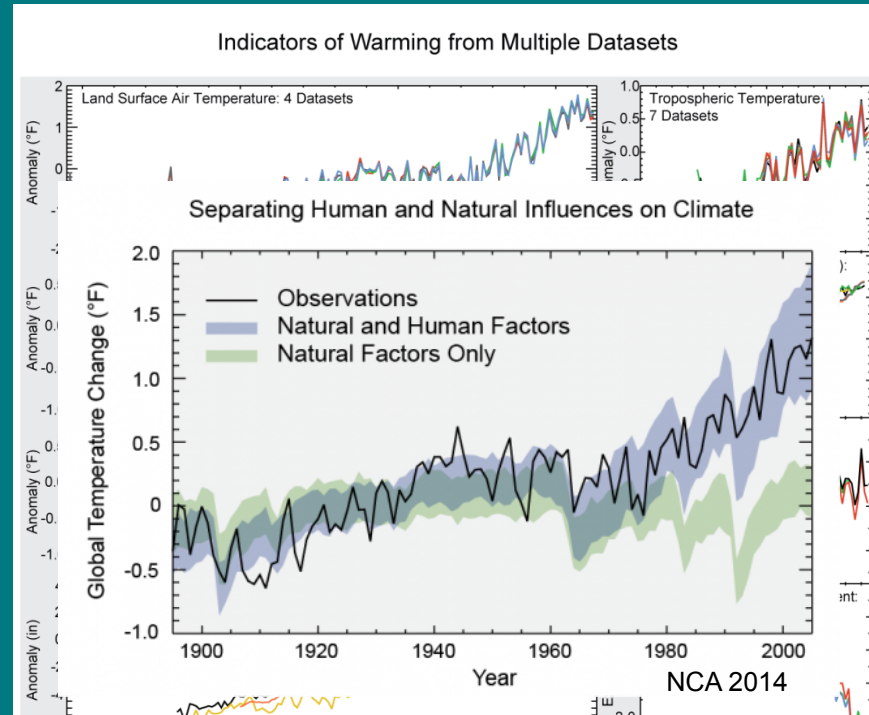

- **Climate?**
  - measured over long spans of time
  - naturally variable
  - effected by abiotic and biotic factors
  - Earth's climate is hospitable due to it's atmosphere & the associated greenhouse gases (GHG)

# Stressors identification

- Climate change? Global warming

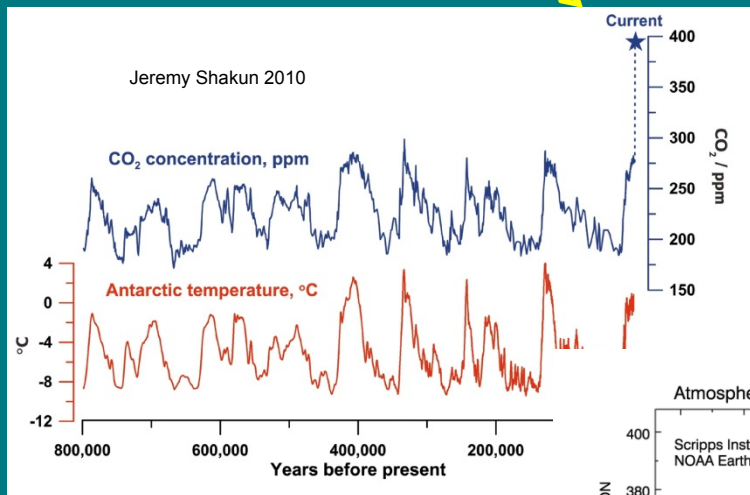

# Stressors identification: carbon bust

Human influence on the climate system is clear, and recent anthropogenic emissions of **greenhouse gases** are the **highest in history**. Recent climate changes have had widespread **impacts on human and natural systems**.

IPCC AR5

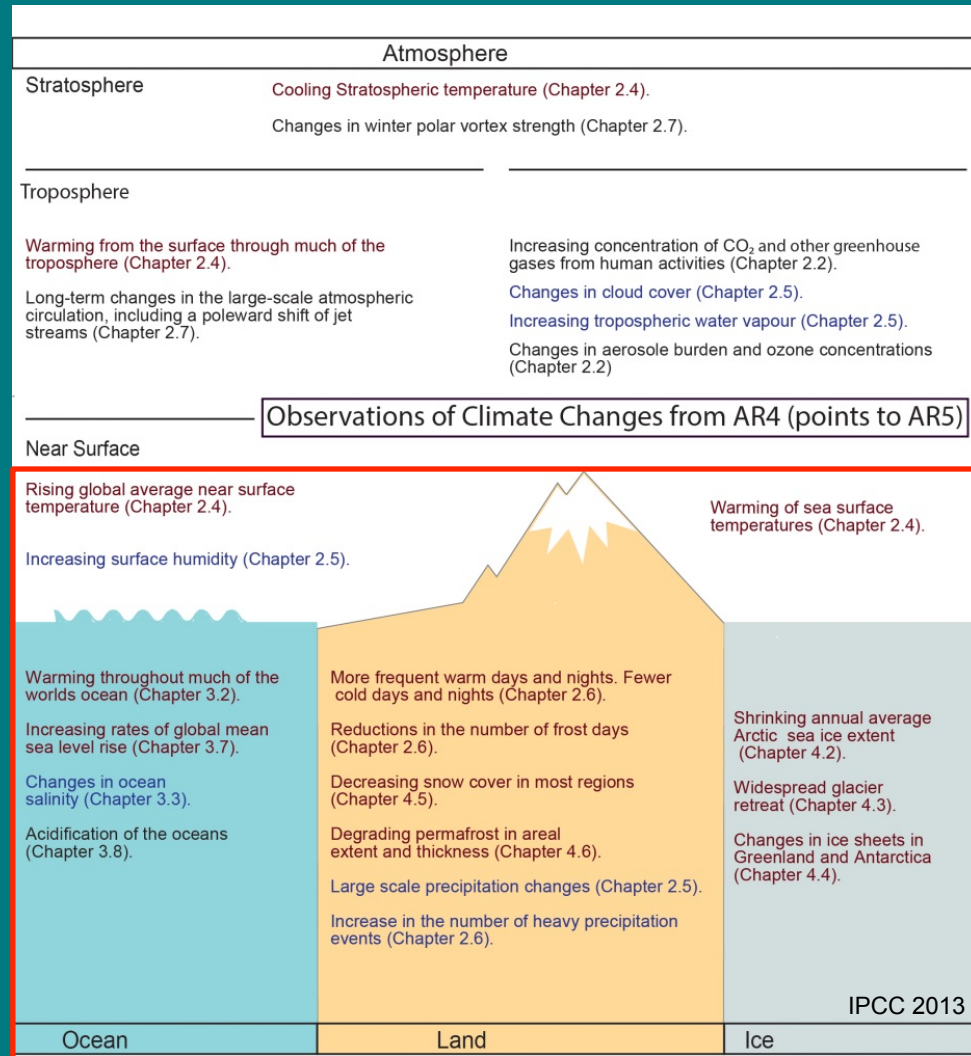

# Stressors Identification

# Stressors identification

↑ temperatures  
(air, water, oceans)

↑ sea levels

Δ salinity

↓ pH

↑ humidity

Δ precipitation

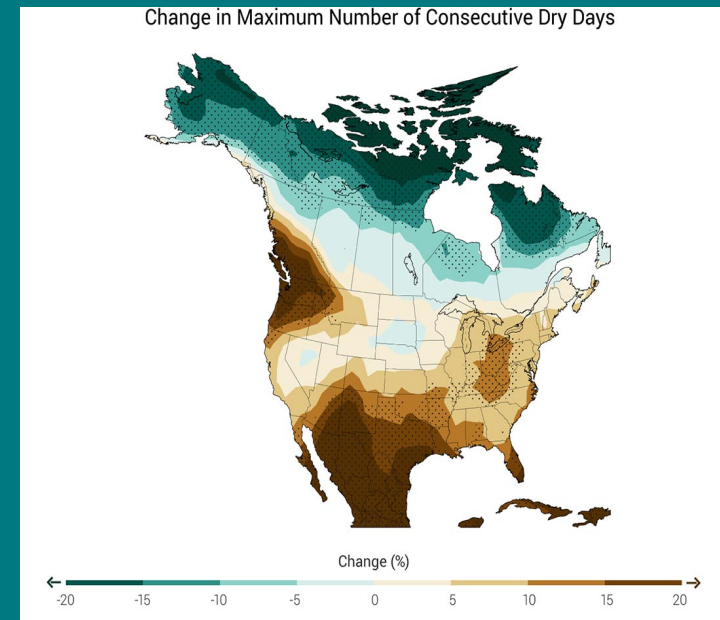

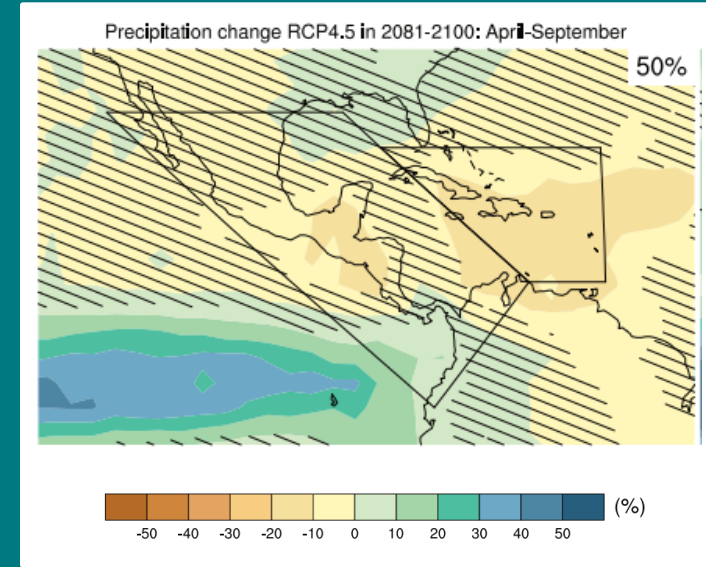

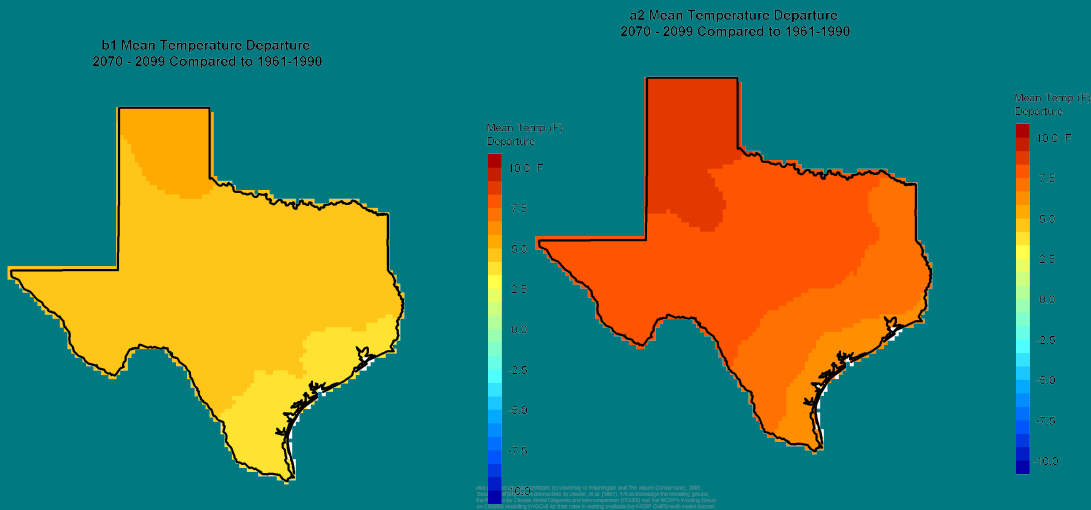

↑ drought

↑ storminess

# Stressors identification: future risk

- Increases in CO2 emissions
- Increase in extreme weather events of all kinds
  - Rain
  - Flooding
  - Drought
  - Hurricanes
- Increases in air and water temperature
- Sea level rise
- Changes in ocean chemistry

# Vulnerability assessment

**Goal:** Identify sectors that may be impacted by climate change (stressors)

1. Stressors Identification
- 2. Stressors analysis**
3. Scenario choice
4. Sectors identification
5. Sectors analysis

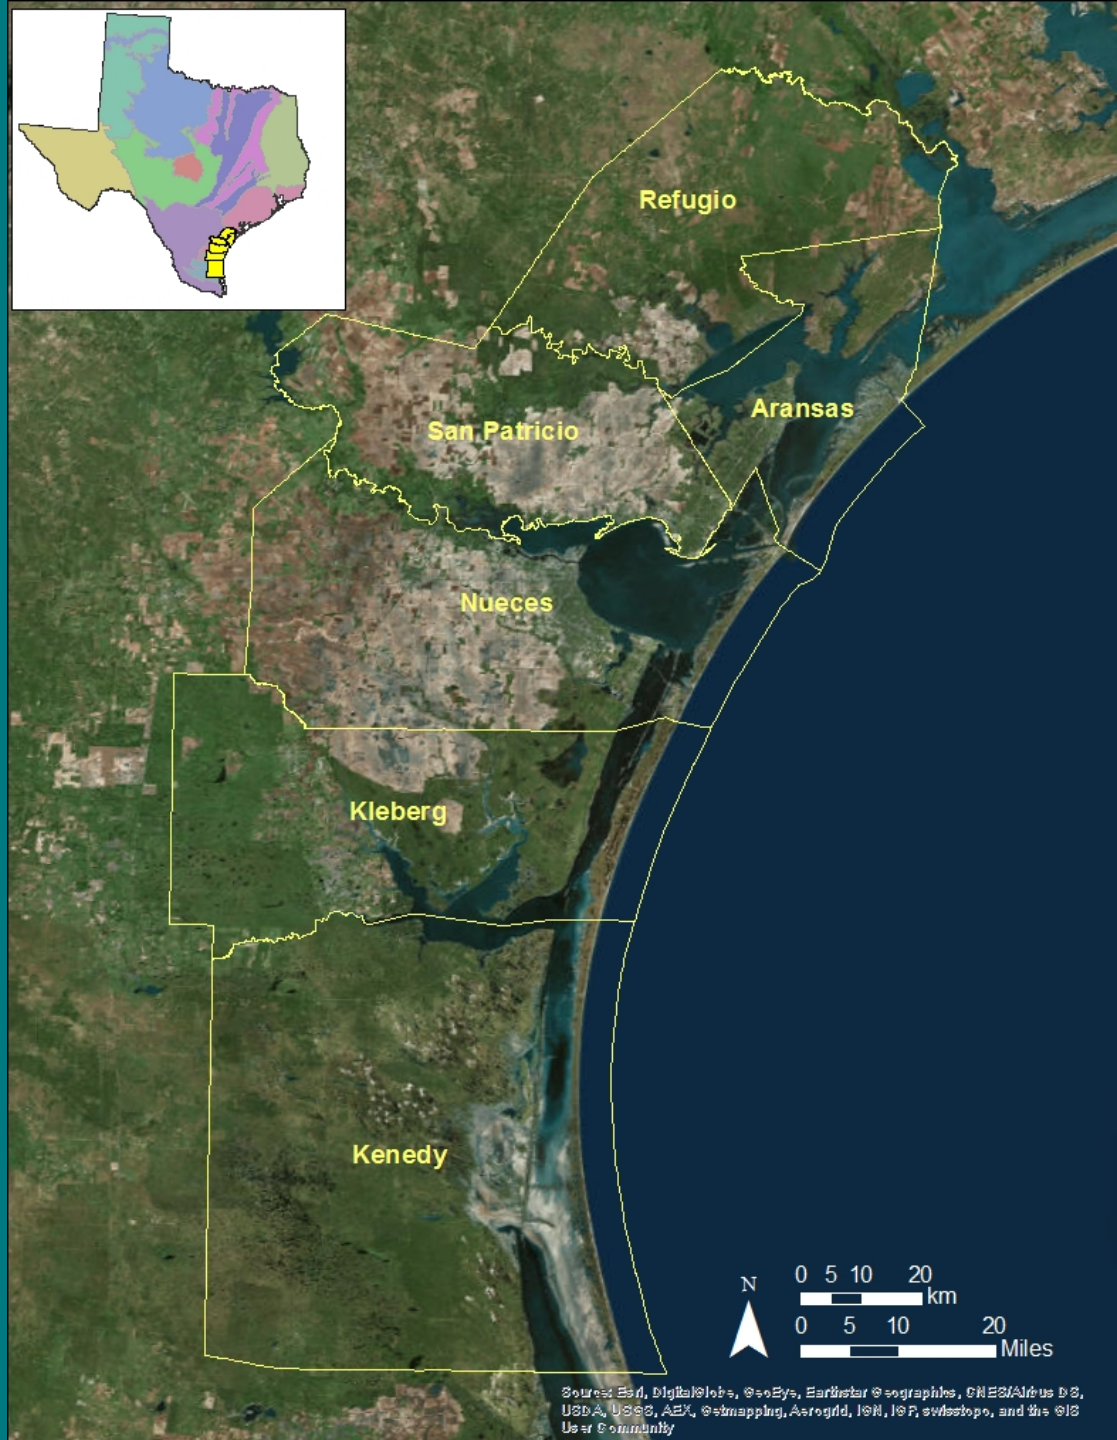

# Stressors analysis

- What is the study area?
- What are the historical trends in that area?
- What stressors are applicable to the region?

# Study area

- Coastal counties of Texas  
Coastal Bend
- 3 of 7 major estuaries in Texas
  - 25 bays and lakes
- 75 miles of shoreline
- 8<sup>th</sup> largest Port in US
- Universities, Naval air station, refineries

Sources: Esri, DigitalGlobe, GeoEye, Earthstar Geographics, CNES/Airbus DS, USDA, USGS, AeroGRID, IGN, IGP, swisstopo, and the GIS User Community

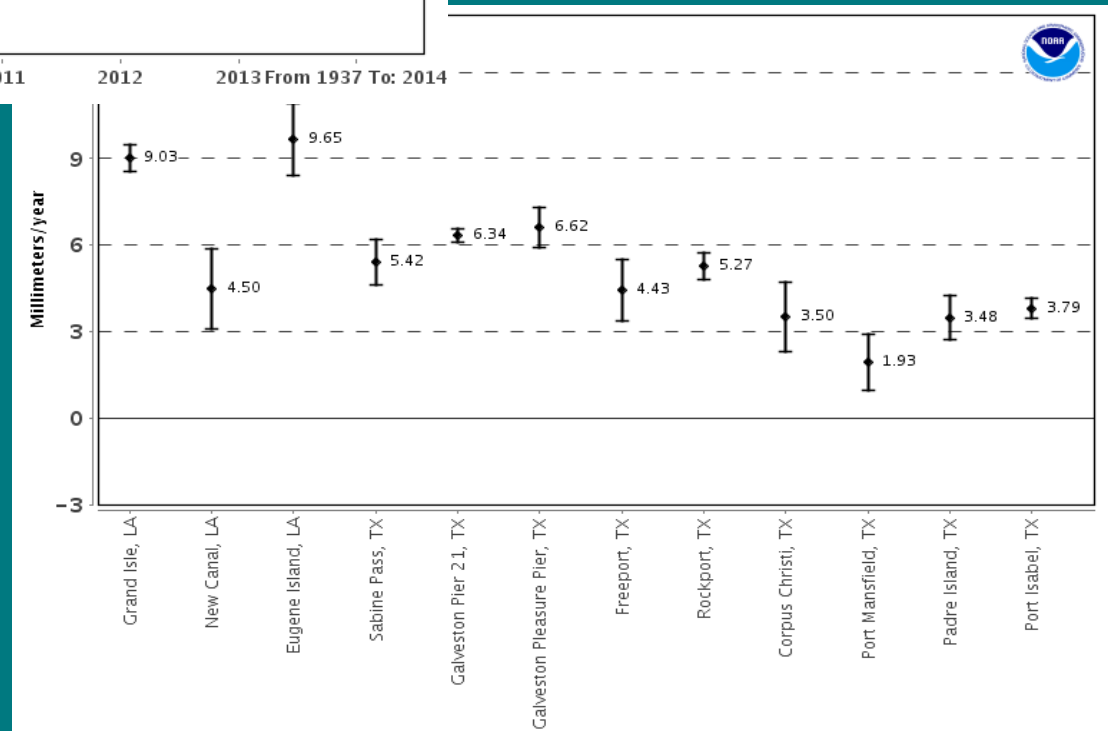

# Historical trends

# Historical trends

0.44 m SLR by 2100

# Historical trends

<http://www.ncdc.noaa.gov/cag/>

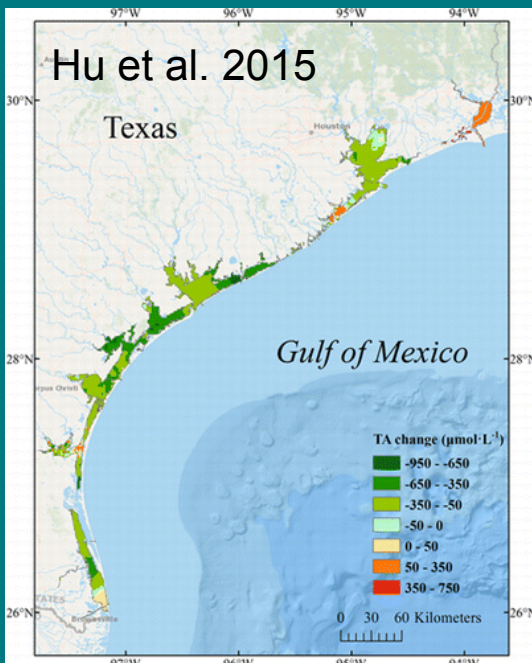

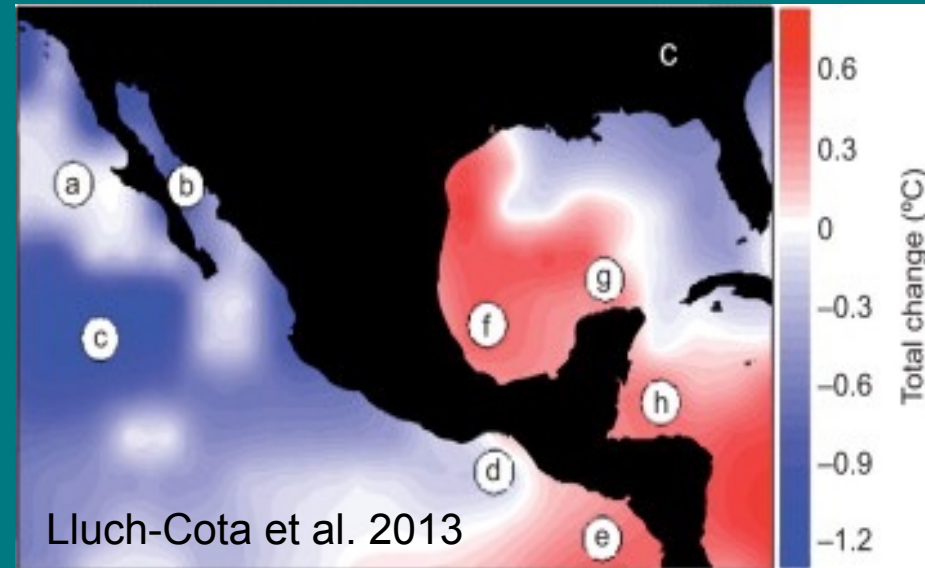

- Increases in air temperature  
 $\sim .33^{\circ}\text{C}/\text{decade} = 2.8^{\circ}\text{C}$  increase by 2100
- Not much change in precipitation

# Historical trends

Water temperatures in the western GOM have been warming for the past 30 years

Alkalinity and pH have been decreasing in CBBEP since the 1960s

# Historical trends

- Storms

# Vulnerability assessment

**Goal:** Identify sectors that may be impacted by climate change (stressors)

1. Stressors Identification
2. Stressors analysis
- 3. Scenario choice**
4. Sectors identification
5. Sectors analysis

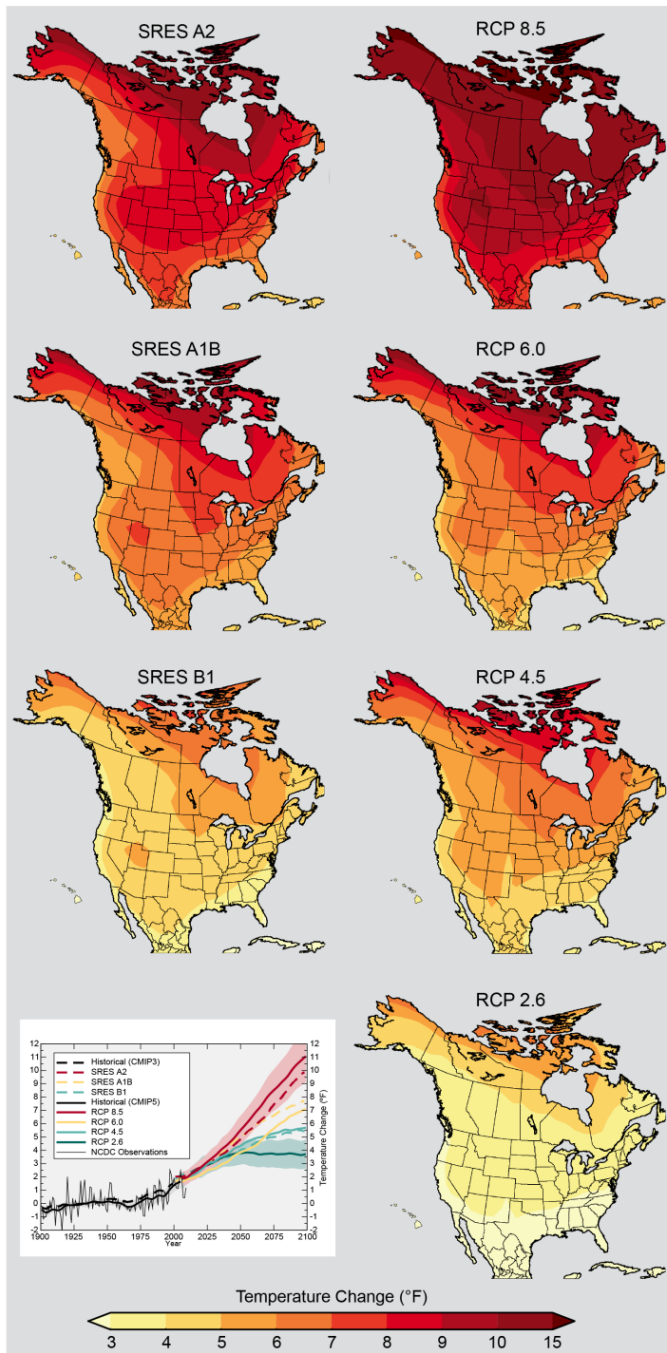

# Scenario choice

IPCC adopted new scenarios in AR5 (2014)

Representative Concentration Pathways (RCP)

Projected Annually-Averaged Temperature Change

Precipitation change Central America April-September

(b) Global average surface temperature change (relative to 1986–2005)

(c) Northern Hemisphere September sea ice extent

(d) Global mean sea level rise (relative to 1986–2005)

(e) Global surface ocean pH

# Scenario choice

- IPCC & NCA projections for climate change
  - Parris et al. 2012 for SLR
- 3 scenarios
  - Why not 2? Or 4? RCP2.6?
- Time stamp 2100

		Scenarios		
Scenario Family	RCP (IPCC 2013)	Low	Mid	High
	Example literature	4.5	6.0	8.5
	SRES (IPCC 2000)	Rogelj et al. 2012 B1	Rogelj et al. 2012 B2	Watson et al. 2015 A2
Temperature anomaly by 2100 since pre-industrial (°C)		2.5	3	5
CO2 (ppm)		520	620	950+
SLR (m)		0.5	1.2	2.0
Ocean pH decrease		0.15	0.21	0.32

# Vulnerability assessment

**Goal:** Identify sectors that may be impacted by climate change (stressors)

1. Stressors Identification
2. Stressors analysis
3. Scenario choice
- 4. Sectors identification**
5. Sectors analysis

# Sector identification

- IPCC AR5 WGII Chapter 26-  
North America (2014)
- Charlotte Harbor Regional  
Climate Change Vulnerability  
Assessment (2010)

# Sectors ID

**Critical facilities**

**Ecosystems & wildlife**

**Coastal resources**

**Cultural resources**

**Human health**

**Water resources**

**Economic activity**

# Vulnerability assessment

**Goal:** Identify sectors that may be impacted by climate change (stressors)

1. Stressors Identification
2. Stressors analysis
3. Scenario choice
4. Sectors identification
- 5. Sectors analysis**

# Sectors analysis

- How does climate change impact sectors?
- Can we measure that impact?

# Sector analysis

## Observations of Climate Changes from AR4 (points to AR5)

### Near Surface

Rising global average near surface temperature (Chapter 2.4).

Increasing surface humidity (Chapter 2.5).

Warming of sea surface temperatures (Chapter 2.4).

Warming throughout much of the world's ocean (Chapter 3.2).

Increasing rates of global mean sea level rise (Chapter 3.7).

Changes in ocean salinity (Chapter 3.3).

Acidification of the oceans (Chapter 3.8).

More frequent warm days and nights. Fewer cold days and nights (Chapter 2.6).

Reductions in the number of frost days (Chapter 2.6).

Decreasing snow cover in most regions (Chapter 4.5).

Degrading permafrost in areal extent and thickness (Chapter 4.6).

Large scale precipitation changes (Chapter 2.5).

Increase in the number of heavy precipitation events (Chapter 2.6).

Shrinking Arctic sea ice (Chapter 4.2).

Widespread retreat (Chapter 4.3).

Changes in ice extent and thickness in Greenland and Antarctica (Chapter 4.4).

### Critical facilities

### Ecosystems & wildlife

### Coastal resources

### Cultural resources

### Human health

### Water resources

### Economic activity

# Sector analysis: General impacts

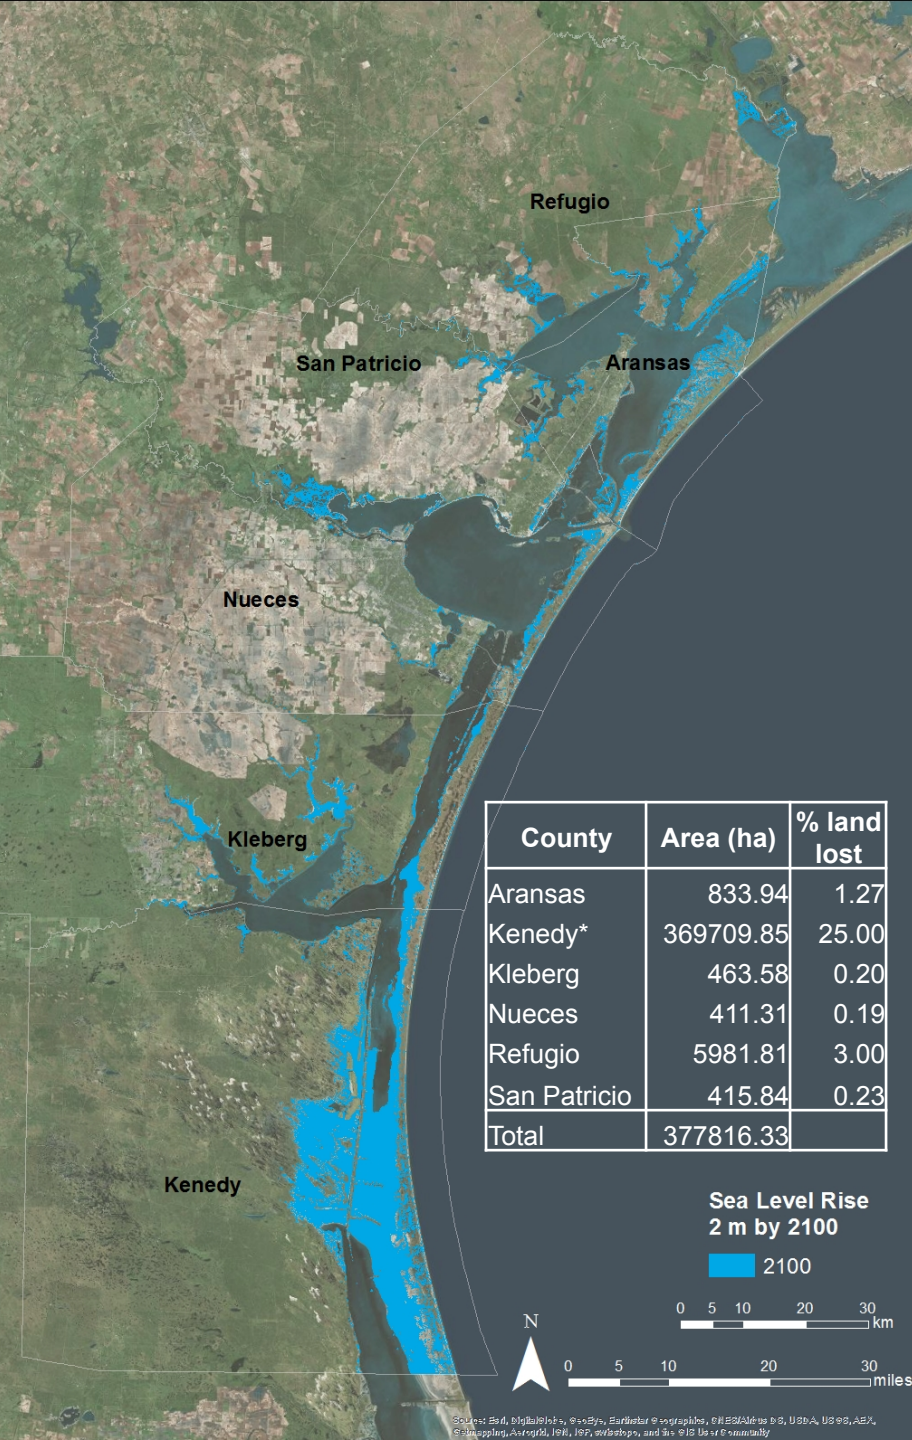

- Human health
  - Temperature-related illness and death
  - Extreme weather-related mortality and health effects
  - Vector-borne diseases
  - Freshwater and food shortages
  - Water and food-borne illnesses
  - water and air pollution
- Water resources
  - Water quality decline
  - Freshwater shortage
  - Saltwater intrusion
- Economic activity
  - Fisheries decline
  - Tourism and recreation threatened
- Cultural resources & Critical facilities
  - Threatened by sea level rise and extreme weather events
  - Cost of protection
- Ecosystems & wildlife
  - Heat stress
  - Shift of ecological zones
  - Decrease in biodiversity
  - Invasion of exotics
- Coastal resources
  - Increased erosion
  - Loss of coastal lands (and the protection they provide)

# Sectors analysis: Measurable impacts

## *Coastal resources*

### Inundation extent

- Coastal land lost
- Overlay to obtain vulnerable sectors

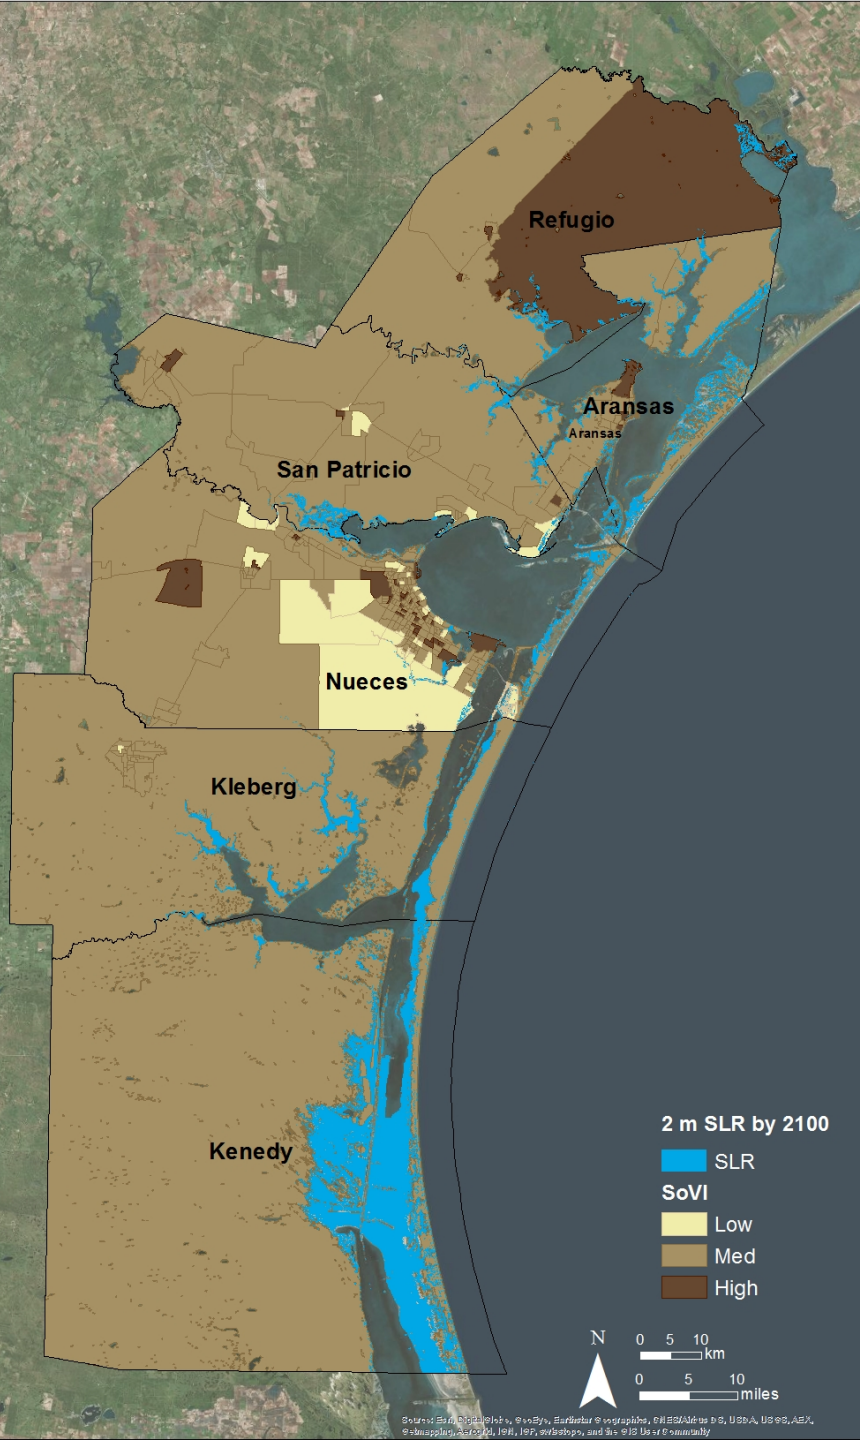

# Sectors analysis: Measurable impacts

## *Human health*

### Social Vulnerability Index

- Social vulnerability to environmental hazards
- 29 socioeconomic variables

# Sectors analysis: Measurable impacts

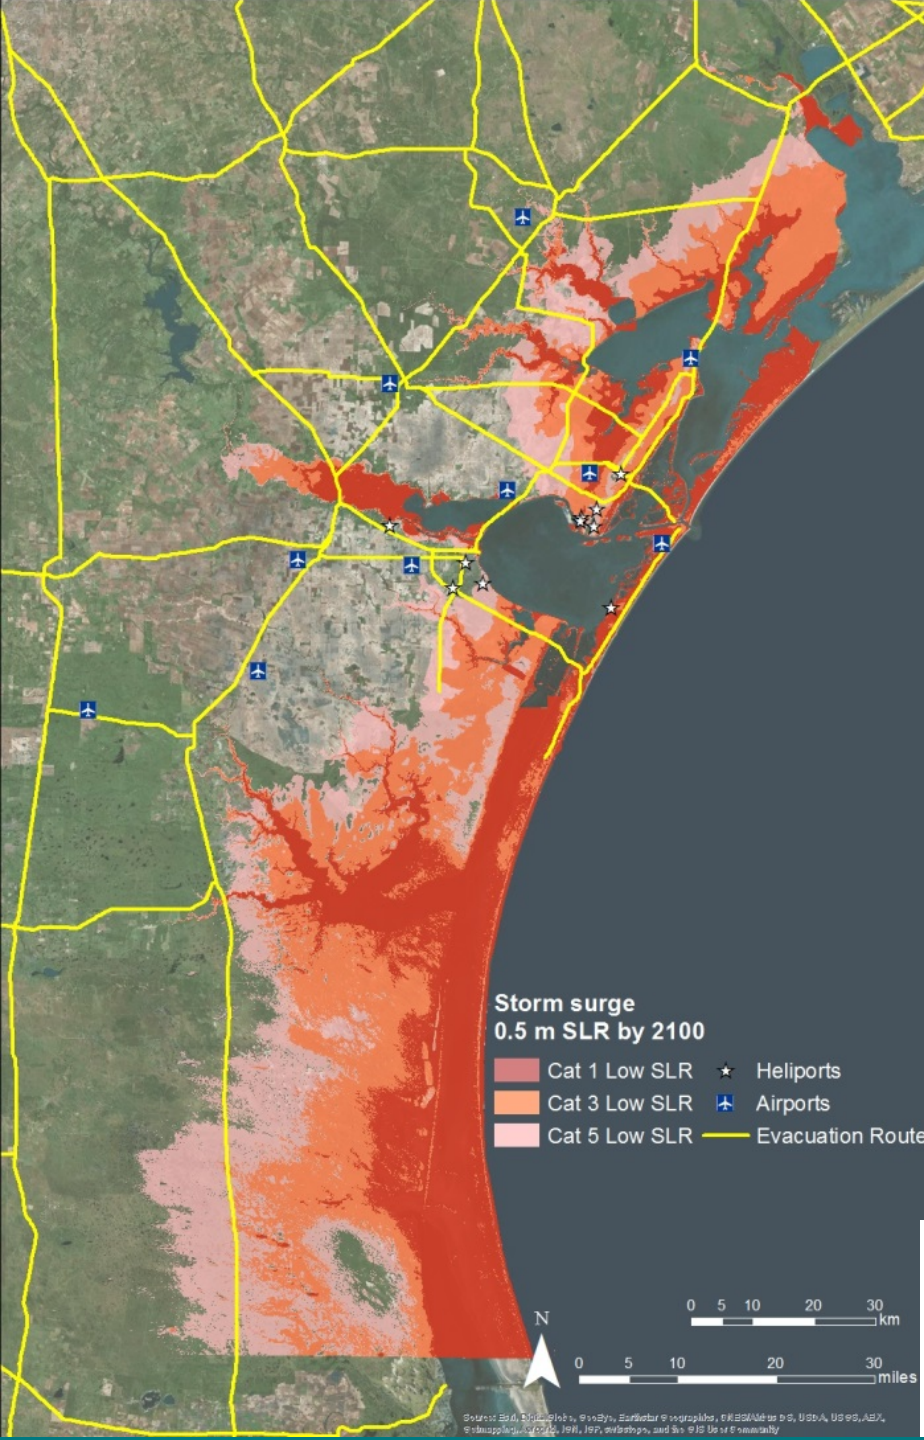

## *Critical facilities*

### Transportation infrastructure

- Percentage of roads inundated
- Number of heliports and airports at risk
- Port facilities

### Storm surge + SLR

- Storm surge associated with a 0.5m (intermediate scenario) sea level rise

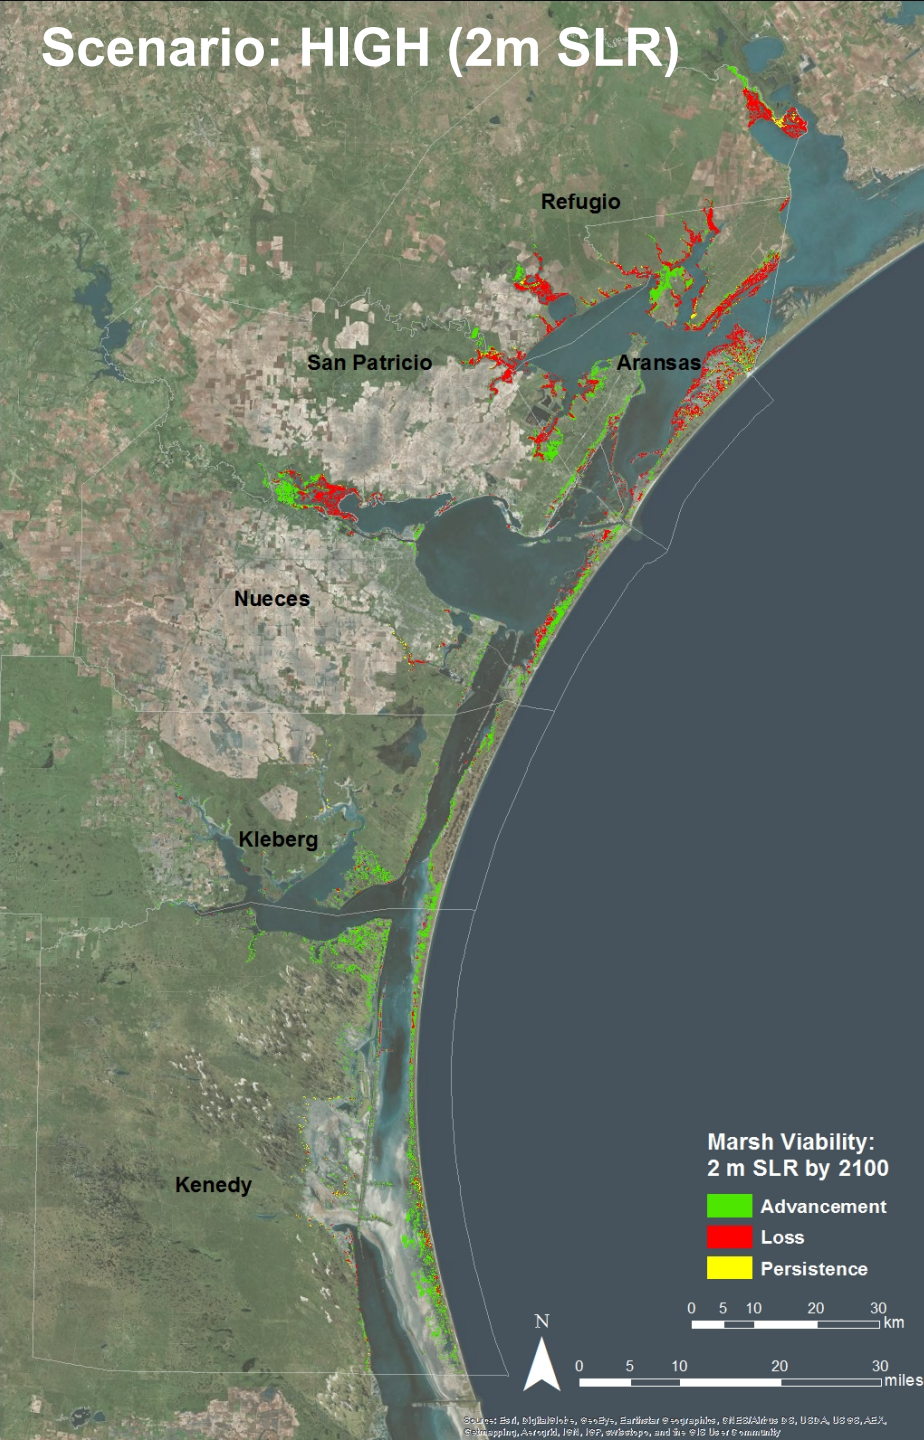

A geospatial dataset for U.S. hurricane storm surge and sea-level rise vulnerability: Development and case study applications

Megan C. Maloney, Benjamin L. Preston\*

Climate Change Science Institute and Environmental Sciences Division, Oak Ridge National Laboratory, PO Box 2008, One Bethel Valley Road, TN 37831-6253, United States

## Scenario: HIGH (2m SLR)

## Sectors analysis: Measurable impacts *Ecosystems and wildlife*

*Marsh viability = (marsh gain + marsh persistence) - marsh loss*

# Sectors analysis: Measurable impacts

2 m SLR by 2100

SLR

Superfund site

Unaffected

Effected

Landfill

Power plants & Refineries

Unaffected

Effected

San Patricio

Aransas

Power plant: **Harbor Wind**

- 6 wind turbines
- Independent

Superfund site: **Falcon refinery**

- 78 acre parcel effected by SLR

Kleberg
